

## Institute for Surgical and Interventional Simulation

The Institute for Surgical and Interventional Simulation (ISIS) at the University of Washington aims to provide leadership in the use of simulation technology to ensure the best possible care from highly trained medical professionals. Quality medical education and training reinforce improved patient care, both safety and outcome.

ISIS seeks to:

- Increase efficiency
- Build proficiency
- Improve outcomes
- Improve the quality of education
- Enhance team communications
- Create new technologies and conduct valuable research

ISIS seeks to replace the method of “see one, do one, teach one” with an approach that can measure, validate, and perfect performance in a controlled, safe, and realistic environment.
